

What is a **Circular Economy**?

Organic materials are broken down in a natural process to enrich soils and support renewable resources.

Materials can be separated and salvaged.

Small or no residual waste

Take
Raw Materials

Reuse
offcuts
and
excess

RECYCLE

MAKE

USE

Reuse

Repair

Design products and packaging to be reused, repaired, have parts replaced and be easily recycled.

New business models with products being rented, used under a subscription-base, and more product stewardship schemes.

We buy less and use products fully.
